

VECMOCON TECHNOLOGIES

Vehicle Intelligence Module

Automotive grade Connector

Automotive Connector

IP64 rated enclosure

DRIVEN BY INTELLIGENCE

i-VEC[®]
DRIVE

Description Our Vehicle Intelligence Module shares the vehicle data with a remote server for preventive maintenance, diagnostics and provides wireless/keyless control to the owner. The device supports edge ML and runs complex range estimation algorithms for real time results to avoid range anxiety related to EV's. The device detects theft attempts via theft alarms and notifications.

Features

- IoT enabled (internet 2G/4G, CAN 2.0, BLE)
- Onboard data Logging to avoid data loss
- Regular FOTA Updates
- Internet and Bluetooth Communication secured via TLS v1.2 and AES-256
- Device management infrastructure and mobile applications
- Easy third party integration
- Theft alarm and notification
- Keyless access

Applications

2 & 3 Wheeler

Vehicle Leasing Operations.

Shared Mobility

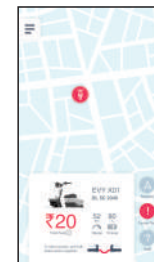

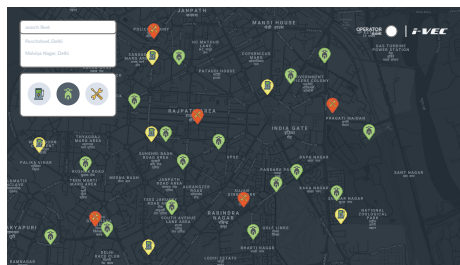

Fleet Management

Asset Tracking Solutions

Fleet Management tool and Mobile Application

Technical Specifications

Parameter	Comment	Min	Typical	Max	Units
Voltage	Supply voltage	4.8	5.0	5.5	V
Operating Temp.	In casing	-35	+25	+75	
Can speed	SAE J1939-11 SAE J1939-21 SAE J1939-71 SAE J1939-73		500		kbps
Bluetooth	BLE 5.0		5-10		m
Internet	4G/2G connectivity	-	-	8.9 _(DL) /3.1 _(UL)	Mbps
Local data storage	Nand Flash		128		Mb
Dimensions	length X breadth X height		(120X 121 X33)		mm
